Executive Narrative & AI Insights

During the period from August 2, 2026, to August 31, 2026, the team logged 843.75 actual hours against an expected baseline of 779.0 hours across 483 tasks, representing an overall utilization rate of 108.3% and a net overrun of 64.75 hours. Delivery was predominantly driven by Support work (373.75 actual hours, 44.3% share) and New Development (269.5 actual hours, 31.94% share), while service demand was largely concentrated in the JIWAJI and BHOJ accounts, which together consumed nearly 44% of total effort. While task execution remained high, capacity management revealed significant resource imbalances. Individual utilization ranged from 89.4% to 143.3%, highlighted by a critical workload strain on Vandna Khare (+56.5 hours variance). Addressing scope estimation gaps in New Development and Change tasks alongside active workload rebalancing will be essential to maintaining sustainable delivery velocity.

Key Governance Findings:

- Overall Overweight Capacity: The team operated above target capacity at 108.3% utilization (+64.75 hours variance), driven primarily by heavy volume in Support and New Development work types.
- Severe Individual Workload Imbalance: Vandna Khare experienced a major overrun of 143.3% utilization (+56.5 hours variance), while Amit Sondhiya operated under capacity at 89.4% utilization (-11.5 hours variance).
- High Service Concentration: Operational effort was disproportionately absorbed by top accounts, with JIWAJI (204.0 actual hours, 24.18%) and BHOJ (167.0 actual hours, 19.79%) accounting for 43.97% of overall team output.
- Estimation Discrepancies in Scope: New Development had the largest absolute variance (+28.5 hours variance), whereas Change requests saw the highest relative effort overrun, exceeding baseline estimates by nearly 69% (24.5 actual vs 14.5 expected hours).

Strategic Recommendations:

- Immediate Workload Rebalancing: Shift incoming Support and New Development assignments away from overburdened personnel—specifically Vandna Khare—toward available capacity, such as Amit Sondhiya.
- Enhance Estimation Benchmarks: Review baseline estimation models for New Development and Change tasks to incorporate historical overruns and prevent initial scope underestimation.
- Targeted Account Governance: Analyze root causes of ticket volume in JIWAJI and BHOJ to identify systemic issues and transition repetitive support effort into durable engineering fixes.
- Establish Capacity Guardrails: Implement executive monitoring alerts for any team member exceeding 110% utilization to mitigate burnout and ensure delivery predictability.

Work-Type-wise Resource Utilization

Work Type	Tasks	Expected (h)	Actual (h)	Share %	Variance (h)
Support	261	357.5	373.8	44.3%	+16.2

Most Overloaded Work & Governance Highlights

Category	Service / Resource	Actual Effort	Utilization	Governance Highlight
Service	JIWAJI	204.0 hrs	24.18%	Highest overall workload (24.18% of team effort); major demand footprint
Service	BHOJ	167.0 hrs	19.79%	Substantial ongoing effort (19.79% share); major operational commitment
Service	RALVV	118.0 hrs	13.99%	Notable footprint (118.0 hrs logged)
Resource	Vandna Khare	187.0 hrs	143.3%	Operating above nominal capacity (+56.5 hrs variance); risk of burnout
Resource	Sakshi Patel	148.25 hrs	110.2%	Operating above nominal capacity (+13.75 hrs variance); risk of burnout
