Executive Narrative & AI Insights

During August 2026, the team logged 843.75 actual hours against an expected baseline of 779.0 hours across 483 tasks, resulting in a overall utilization rate of 108.3% and a total capacity overrun of 64.75 hours. Delivery demand was heavily centered on operational baseline services and core development work, pushing overall resource consumption past planned bounds.

Key Governance Findings:

- Overall Capacity Exceeded: The team operated at 108.3% utilization, producing an effort overrun of 64.75 actual hours over expected baseline across 483 completed tasks.
- Work Type Overrun Drivers: 'New Development' saw the largest variance at +28.5 hours (269.5 actual vs 241.0 expected), followed by 'Support' with +16.25 hours (373.75 actual hrs) and 'Other / Meeting / Change' with +12.5 hours.
- Service Level Concentration: Client effort was disproportionately absorbed by JIWAJI (204.0 actual hrs, 24.18%) and BHOJ (167.0 actual hrs, 19.79%), which together accounted for nearly 44% of total logged hours.
- High Individual Resource Load: Individual delivery was led by Vandna Khare (187.0 actual hours across 87 tasks) and Abhishek Rathore (171.0 actual hours across 92 tasks), indicating concentrated delivery pressure on key team members.

Strategic Recommendations:

- Re-baseline Scope Estimations: Adjust planning and estimation models for New Development and Support categories to account for recurring effort overruns (+44.75 hours combined).
- Balance Service & Individual Workloads: Distribute operational delivery across the broader team to relieve heavy effort concentrations on lead resources like Vandna Khare and Abhishek Rathore.
- Optimize Meeting and Overhead Hours: Review and streamline tasks under 'Other / Meeting / Change' to curb non-billable/overhead variance (+12.5 hours across 61 tasks).
