Executive Narrative & AI Insights

During August 2026, the team logged 843.75 actual hours against an expected baseline of 779.0 hours across 483 tasks, resulting in a overall team utilization rate of 108.3% and a net overrun of 64.75 hours. Delivery was heavily weighted toward operational maintenance and software building, with Support and New Development accounting for over 76% of total logged effort.

Key Governance Findings:

- Overall team capacity ran hot at 108.3% utilization, exceeding baseline expectations by 64.75 hours across 483 completed tasks.
- New Development created the highest effort variance, exceeding estimates by 28.5 hours (269.5 actual vs 241.0 expected hours), while Support logged the largest total volume at 373.75 hours (44.3% share).
- Service demand was concentrated in top accounts, with JIWAJI (204.0 hrs), BHOJ (167.0 hrs), and RALVV (118.0 hrs) absorbing 57.96% of total team hours.
- Top individual contributors carried heavy operational loads, led by Vandna Khare (187.0 actual hrs, 87 tasks) and Abhishek Rathore (171.0 actual hrs, 92 tasks).

Strategic Recommendations:

- Refine estimation frameworks for New Development initiatives to mitigate recurring effort overruns and align capacity planning.
- Optimize internal communication and meeting cadence to curb non-development overhead, which currently consumes 107.0 actual hours (12.68% of capacity).
- Rebalance work distribution across key services (JIWAJI, BHOJ, RALVV) to alleviate high task loads on top individual effort leaders.
- Standardize employee profile baseline data within time-tracking tools to ensure variance and utilization metrics accurately reflect assigned allocations.
