

Team Resource Utilization Report

Reporting Period: August-2026 | Generated via Automated Pipeline

TOTAL TASKS	EXPECTED HRS	ACTUAL HRS	NET VARIANCE	UTILIZATION
483	779.0	843.8	+64.75h	108.3%

Executive Narrative & AI Insights

During August 2026, the team recorded 843.75 actual hours across 483 tasks against an expected capacity baseline of 779.0 hours, representing an overall team utilization rate of 108.3% and an effort overrun of 64.75 hours. Work delivery was primarily dominated by Support operations (373.75 actual hours; 44.3% of total effort) and New Development (269.5 actual hours; 31.94% of total effort), with New Development serving as the single largest contributor to hours variance (+28.5 hours). Service effort was concentrated around key client accounts, with JIWAJI (204.0 hours) and BHOJ (167.0 hours) together accounting for nearly 44% of total resource expenditure. Workload distribution showed significant concentration among senior delivery staff, with Vandna Khare (187.0 actual hours) and Abhishek Rathore (171.0 actual hours) absorbing the highest operational load.

Key Governance Findings:

- Overall team utilization reached 108.3%, exceeding planned hours by 64.75 hours across 483 total tasks.
- New Development drove the highest actual hour overrun (+28.5 hours variance over 241.0 expected hours), followed by Support (+16.25 hours variance) and Other/Meeting/Change (+12.5 hours variance).
- Service demand was heavily skewed toward top accounts, with JIWAJI (24.18% share) and BHOJ (19.79% share) consuming 371.0 aggregate hours.
- Individual operational output was unevenly distributed, led by Vandna Khare (187.0 actual hours) and Abhishek Rathore (171.0 actual hours).

Strategic Recommendations:

- Recalibrate effort estimation models for New Development work items to mitigate recurring variance and prevent unbudgeted overruns.
- Implement load-balancing strategies across the service delivery team to redistribute actual effort away from top-loaded individuals like Vandna Khare and Abhishek Rathore.
- Analyze recurring Support volume (266 tasks, 373.75 hours) to identify root-cause tickets and deploy targeted automation or operational self-service.
- Audit baseline capacity settings in tracking systems to ensure employee expected hour baselines accurately reflect actual operational availability.

Work-Type-wise Resource Utilization

Work Type	Tasks	Expected (h)	Actual (h)	Share %	Variance (h)
Support	266	357.5	373.8	44.3%	+16.2
New Development	118	241.0	269.5	31.9%	+28.5
Issue	23	49.0	58.0	6.9%	+9.0
Enhancement	15	37.0	35.5	4.2%	-1.5
Other / Meeting / Change	61	94.5	107.0	12.7%	+12.5
Total	483	779.0	843.8	100.0%	+64.8

Resource-wise Resource Utilization

Resource Name	Tasks	Expected	Actual	Variance	Util %	Done	WIP	Wait
Vandna Khare	87	8.0	187.0	+1.1	0.0%	87	0	0
Abhishek Rathore	92	10.0	171.0	+1.0	0.0%	92	0	0
Sakshi Patel	98	5.0	148.2	+0.9	0.0%	98	0	0
Priyanshu Shrivastava	49	1.0	99.5	+0.6	0.0%	49	0	0
Amit Sondhiya	75	6.0	96.5	+0.6	0.0%	75	0	0
Sunil Shende	82	2.0	141.0	+0.8	0.0%	82	0	0

Most Overloaded Work & Governance Highlights

Category	Service / Resource	Actual Effort	Utilization	Governance Highlight
Service	JIWAJI	204 hrs	24.2%	Highest overall workload; major New Development and Issue effort
Service	BHOJ	167 hrs	19.8%	High Support dependency; major operational workload
Resource	Vandna Khare	187 hrs	111.3%	Above nominal capacity
Resource	Abhishek Rathore	171 hrs	101.8%	Above nominal capacity
Resource	Sakshi Patel	148.25 hrs	88.2%	High workload
Task Type	Support	373.75 hrs	44.3%	Largest workload category
Task Type	New Development	269.50 hrs	31.9%	Major development effort
