Executive Narrative & AI Insights

During August 2026, the team delivered 483 tasks totaling 843.75 actual hours against an expected baseline of 779.0 hours, representing a utilization rate of 108.3% and a net overrun variance of 64.75 hours. Workload was primarily driven by Support (373.75 actual hours, 44.3% share) and New Development (269.5 actual hours, 31.94% share), which together accounted for over 76% of total logged effort. From a service portfolio perspective, JIWAJI and BHOJ absorbed the highest concentration of capacity, representing 24.18% (204.0 hours) and 19.79% (167.0 hours) of actual effort respectively. Individual execution was heavily weighted toward key personnel, led by Vandna Khare (187.0 actual hours) and Abhishek Rathore (171.0 actual hours).

Key Governance Findings:

- Overall team capacity was over-budget with a 108.3% utilization rate and a +64.75 hour net variance.
- New Development drove the highest absolute overrun (+28.5 hours variance; 269.5 actual vs. 241.0 expected hours).
- Support activity dominated overall task volume and time consumption, comprising 266 tasks and 373.75 actual hours (44.3% share).
- Service consumption was concentrated in JIWAJI and BHOJ, which collectively accounted for 43.97% (371.0 hours) of total team hours.
- Resource load was skewed toward top contributors, with Vandna Khare (187.0 hrs) and Abhishek Rathore (171.0 hrs) performing a major share of total hours.

Strategic Recommendations:

- Adjust estimation models for New Development activities to mitigate variance overruns (+28.5 hours).
- Perform root-cause analysis on high Support volume (266 tasks) to implement permanent fixes or self-service capabilities.
- Rebalance task assignments across the team to alleviate capacity pressures on top contributors like Vandna Khare and Abhishek Rathore.
- Evaluate resource alignment and service-level commitments for top-tier service consumers, specifically JIWAJI and BHOJ.
