

Team Resource Utilization Report

Reporting Period: 02-Aug-2026 to 31-Aug-2026 | Generated via Automated Pipeline

TOTAL TASKS	EXPECTED HRS	ACTUAL HRS	NET VARIANCE	UTILIZATION
483	779.0	843.8	+64.75h	108.3%

Executive Narrative & AI Insights

During the period from August 2, 2026, to August 31, 2026, the team delivered 483 tasks totaling 843.75 actual hours against an expected baseline of 779.0 hours. This resulted in an overall team utilization of 108.3% and an aggregate effort overrun of 64.75 hours. Delivery demands were primarily driven by Support activities (44.3% of total hours) and New Development (31.94%), while services for JIWAJI and BHOJ absorbed over 43% of the overall operational capacity. Individual resource utilization reveals a notable capacity imbalance across the team. Vandna Khare experienced extreme overutilization at 143.3% (+56.5 hours variance), driving nearly 87% of the total team overrun, accompanied by Sakshi Patel at 110.2% utilization. In contrast, Amit Sondhiya was underutilized at 89.4% (-11.5 hours variance), highlighting clear opportunities for operational load rebalancing.

Key Governance Findings:

- Overall Effort Overrun: Aggregate effort exceeded expected baselines by 64.75 hours, driving team-wide utilization to 108.3% across 483 tasks.
- Work Type Concentration: Support (373.75 hrs) and New Development (269.5 hrs) consumed 76.24% of total team hours, with New Development generating the highest work-type variance at +28.5 hours.
- Critical Resource Imbalance: Vandna Khare (143.3% utilization, +56.5 hrs) and Sakshi Patel (110.2% utilization, +13.75 hrs) triggered high-attention flags, while Amit Sondhiya remained below allocation at 89.4% utilization.
- Service Demand Clustering: Delivery effort was heavily concentrated in top-tier accounts, led by JIWAJI (204.0 hrs / 24.18%) and BHOJ (167.0 hrs / 19.79%).

Strategic Recommendations:

- Rebalance Operational Workload: Reallocate upcoming Support and task assignments from overutilized team members (Vandna Khare and Sakshi Patel) to team members with available capacity (Amit Sondhiya) to mitigate burnout risk.
- Adjust New Development Estimation Baselines: Review estimation models for New Development work to address the +28.5-hour variance and align project scope with realistic actual effort.
- Optimize Support Demand for Key Services: Analyze root causes behind high Support hours (373.75 actual hrs) focused on JIWAJI and BHOJ to identify potential system enhancements or automation opportunities.
- Establish Threshold-Based Resource Monitoring: Implement mid-period workload reviews to track resource utilization thresholds above 110% and proactively reassign capacity before milestone commitments are impacted.

Work-Type-wise Resource Utilization

Work Type	Tasks	Expected (h)	Actual (h)	Share %	Variance (h)
Support	261	357.5	373.8	44.3%	+16.2
New Development	118	241.0	269.5	31.9%	+28.5
Meeting	42	59.5	61.5	7.3%	+2.0
Issue	23	49.0	58.0	6.9%	+9.0
Enhancement	15	37.0	35.5	4.2%	-1.5
Change	9	14.5	24.5	2.9%	+10.0

Other	10	20.5	21.0	2.5%	+0.5
Total	483	779.0	843.8	100.0%	+64.8

Resource-wise Resource Utilization

Resource Name	Tasks	Expected	Actual	Variance	Util %	Done	WIP	Wait
Vandna Khare	87	130.5	187.0	+56.5	143.3%	65	22	0
Abhishek Rathore	91	167.0	171.0	+4.0	102.4%	69	13	10
Sakshi Patel	98	134.5	148.2	+13.8	110.2%	84	14	0
Sunil Shende	78	139.5	141.5	+2.0	101.4%	79	3	0
Priyanshu Shrivastava	49	99.5	99.5	0.0	100.0%	39	10	0
Amit Sondhiya	75	108.0	96.5	-11.5	89.4%	66	9	0

Most Overloaded Work & Governance Highlights

Category	Service / Resource	Actual Effort	Utilization	Governance Highlight
Service	JIWAJI	204.0 hrs	24.18%	Highest overall workload (24.18% of team effort); major demand footprint
Service	BHOJ	167.0 hrs	19.79%	Substantial ongoing effort (19.79% share); major operational commitment
Service	RALVV	118.0 hrs	13.99%	Notable footprint (118.0 hrs logged)
Resource	Vandna Khare	187.0 hrs	143.3%	Operating above nominal capacity (+56.5 hrs variance); risk of burnout
Resource	Sakshi Patel	148.25 hrs	110.2%	Operating above nominal capacity (+13.75 hrs variance); risk of burnout
